PROFILE

Lead Java/Spring developer with 10+ years building systems end to end, from design to production. Designs secure APIs and microservices, CQRS and event-driven architectures for banking (Banque Nationale, Desjardins) and international projects (Atos, People Input). Comfortable wearing both the developer and the ops hat on AWS and Azure; currently helping build an agentic platform (agents, skills, orchestration).

TECHNICAL SKILLS

Languages

Java TypeScript SQL Python

Backend

Practices

Trunk-based development CI/CD GitHub Actions Scrum

Front-end

Angular EmberJS

PROFESSIONAL EXPERIENCE

Java Developer & Lead Dev · Banque Nationale du Canada

10/2021 – present · Montreal, QC

Agentic platform — technical AI agent foundation (architecture, design, development, QA and infra).

- Designs and builds, within a multidisciplinary team, a shared agentic platform.
- Delivers the agent, skills and orchestration building blocks that industrialise AI usage.

Cards API domain — end-to-end management of the debit and credit card lifecycle.

- Develops and maintains the APIs driving the debit and credit card lifecycle, at the core of the bank's payment platform.
- Secures the APIs and their deployment environments (Snyk, DevSecOps practices).
- Drives the testing strategy and trunk-based development that shortened the delivery cycle.

Environment : Java Spring microservices AWS Kubernetes Docker Kafka DynamoDB Redis AI agents Skills
Orchestration Snyk GitHub Actions GitHub Copilot

Next programme — insurance platform redesign: unifying the group's separate insurance systems into one, to simplify quoting and policy subscription.

- Built the services of the new insurance platform on a CQRS architecture.
- Cut the solution's start-up time by applying optimisations drawn from previous projects.
- Covered the codebase with automated tests (JUnit, TestNG) wired into the team's Git workflow.

Environment : Java Spring Genesis Framework CQRS Azure Kubernetes Docker JUnit TestNG

Cykléo — bike sharing tracking and rental platform (01/2019 – 08/2019)

- Developed and maintained the web application running in more than 5 major French cities for over 10 million active users.
- Doubled as ops on the same project: diagnosed and fixed incidents across the QA, staging and production environments.

Cigarette pack traceability platform (06/2018 – 01/2019) — compliance with EU directive 2014/40/EU.

- Joined the architecture team and drove the choice of an event-driven microservices architecture, based on prior cloud experience.
- Delivered the proof of concept, then set up the QA, staging and production environments.

Environment : Java Spring (MVC, Batch, Security, Cloud) EmberJS Angular RabbitMQ OpenShift Keycloak Cucumber JUnit

- Digitalised LafargeHolcim Ivory Coast's sales system: a multi-source web app for orders and stock tracking.
- Built the single subscription-management platform for People Input and its partners.
- Delivered the brokerage app for stock orders, UCITS and bonds (Financial Capital); tests, documentation and support across all three projects.

Environment : Java Spring (MVC, Batch, Security, Cloud, Thymeleaf) Python Flask Django Angular RabbitMQ PostgreSQL
Docker Rancher JUnit

EDUCATION

- **MSc — Data Transmission and Information Security**, Université Cheikh Anta Diop, Senegal · 2017
- **Engineering degree in Telecom & Computer Engineering**, École Supérieure Multinationale des Télécommunications, Senegal · 2013
- **Advanced technician diploma in Telecom & Computer Engineering**, École Supérieure Multinationale des Télécommunications, Senegal · 2011

CERTIFICATIONS

- **AWS Certified Developer – Associate** · 2025
- **LPIC-2** — Linux Professional Institute · 2014
- **LPIC-1** — Linux Professional Institute · 2013
